

Lab Session – Specification-based Test Case Generation

Q1)

[201801028, 201801455, 201801262, 201801165, 201801116]

Constraints:

Day: [1,31]

Month: [1,12]

Year: [1900,2015]

Equivalence classes:

Day

- | | |
|-------------------------------------|--|
| (1) D1: $1 \leq \text{day} \leq 28$ | valid |
| (2) D2: $\text{day} < 1$ | invalid |
| (3) D3: $\text{day} > 31$ | invalid |
| (4) D4: $\text{day} = 29$ | invalid if month is February(2) and year is not leap year |
| (5) D5: $\text{day} = 30$ | valid if month is April(4), June(6), September(9), November(11) |
| (6) D6: $\text{day} = 31$ | valid if month is January(1), March(3), May(5), July(7),
August(8), October(10), December(12) |

Month

- | | |
|-------------------------------|-----------------------------|
| (1) M1: month with 31 days | if month is 1,3,5,7,8,10,12 |
| (2) M2: month with 30 days | if month is 4,6,9,11 |
| (3) M3: month with 28/29 days | if month is 2 |
| (4) M4: month < 1 | invalid |
| (5) M5: month > 31 | invalid |

Year

- | | |
|---|-----------------------|
| (1) Y1: $1900 \leq \text{year} \leq 2015$ | year is leap year |
| (2) Y2: $1900 \leq \text{year} \leq 2015$ | year is not leap year |
| (3) Y3: $\text{year} < 1900$ | invalid |
| (4) Y3: $\text{year} > 2015$ | invalid |

Boundary Value Analysis:

Day: (day/1/2000)

- | | |
|---------------------------|---------|
| 1) day = 1, 2, 15, 30, 31 | valid |
| 2) day = 0, 32 | invalid |

Month: (15/month/2000)

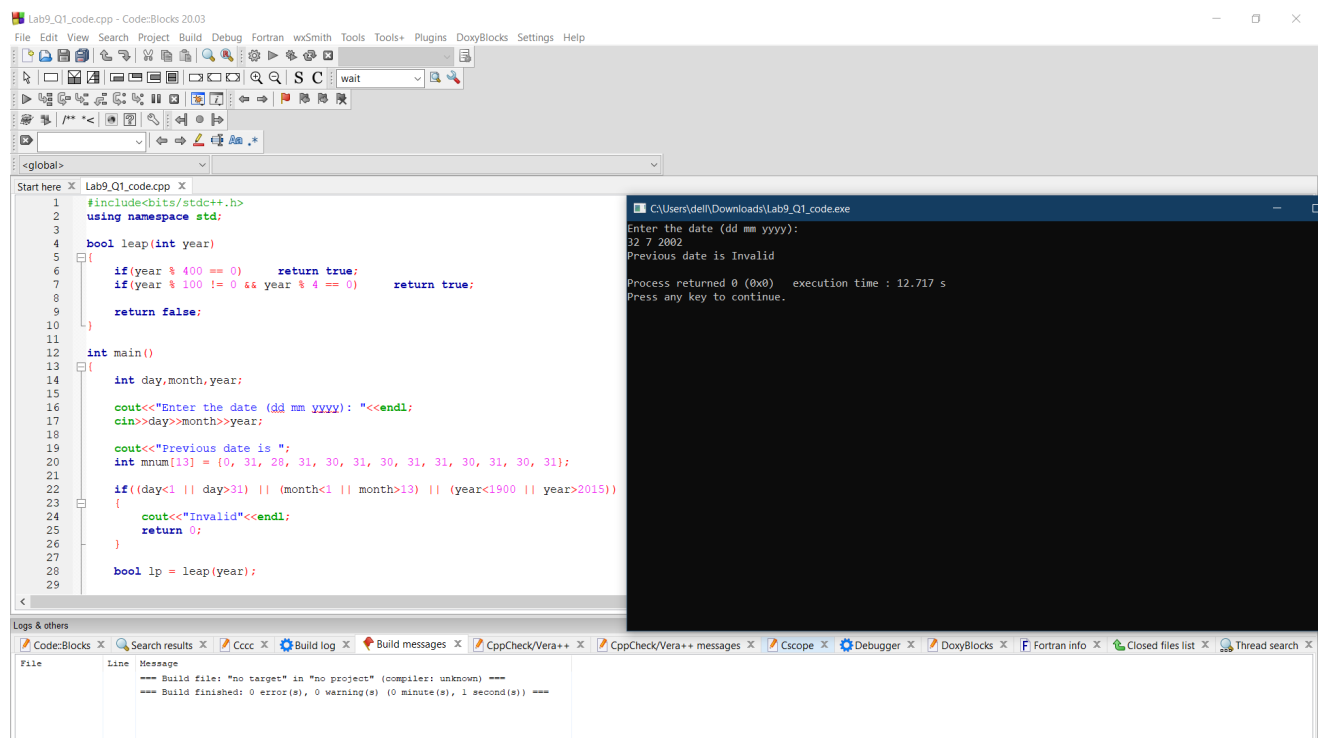

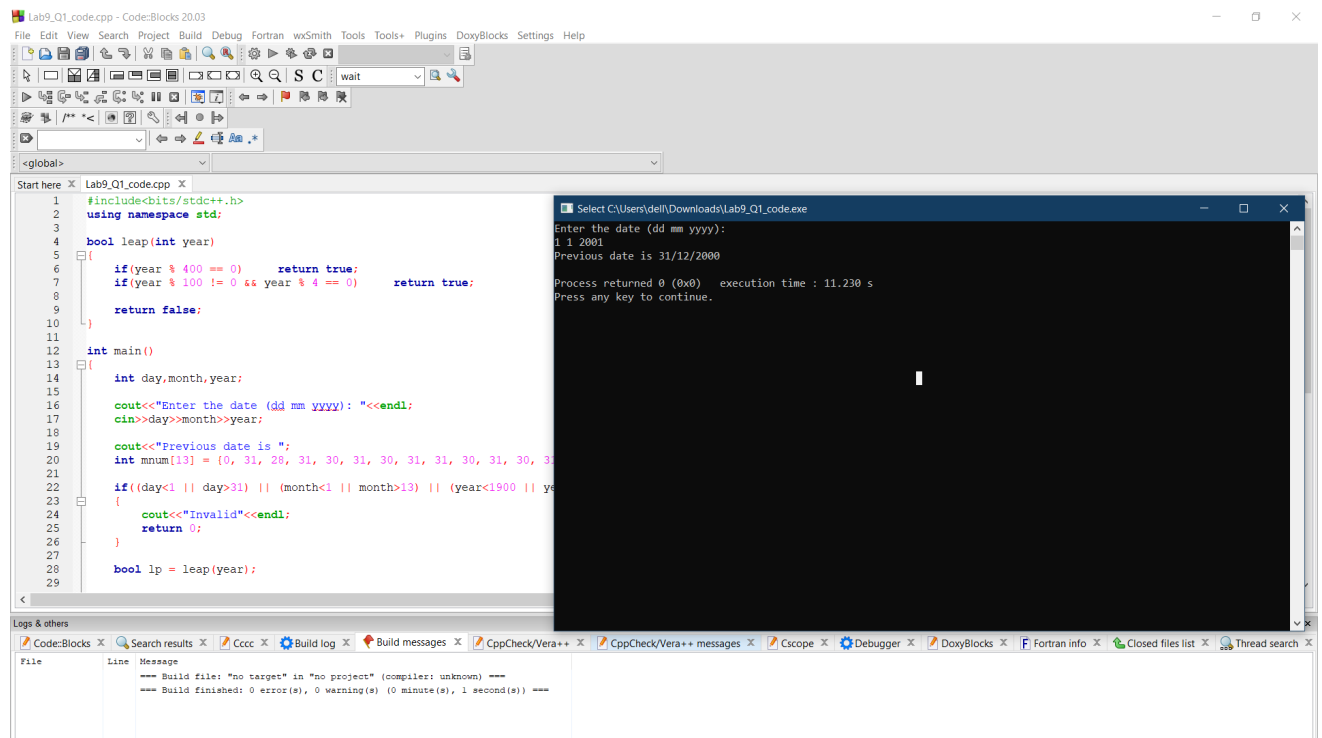

1) month = 1, 2, 6, 11, 12 valid
 2) month = 0, 13 invalid

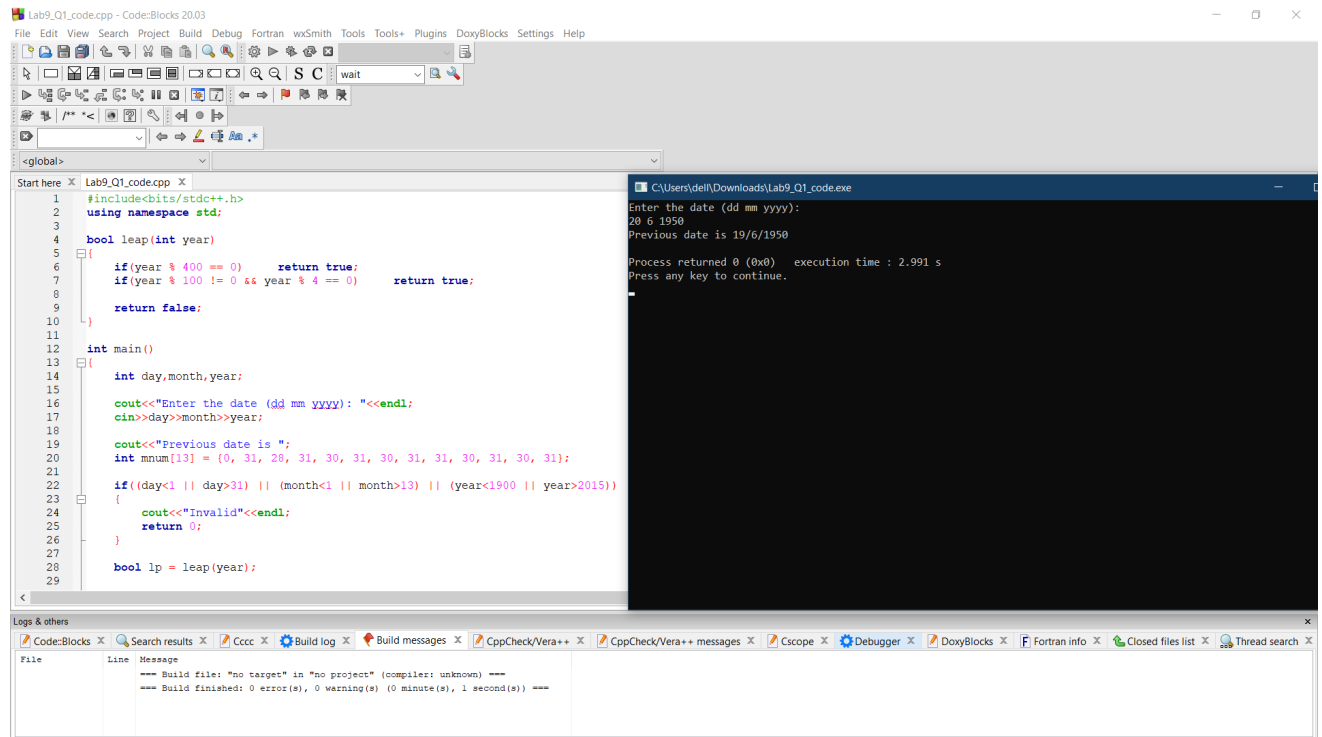

Year: (20/5/year)
 1) year = 1900, 1901, 1970, 2014, 2015 valid
 2) year = 1899, 2016 invalid

Test Suite:

ID	Day	Month	Year	Result
1	1	1	2001	31/12/2000
2	15	1	1999	15/12/1998
3	29	232	2014	Invalid
4	31	13	2000	Invalid
5	23	3	2004	22/04/2003
6	28	2	2014	27/02/2014
7	21	5	2013	20/05/2013
8	20	6	2012	19/06/2012
9	32	7	2012	Invalid
10	31	7	2012	30/07/2012
11	14	3	2011	13/03/2011
12	30	2	2000	Invalid
13	31	2	2004	Invalid
14	12	2	2008	11/1/2008
15	-1	5	2000	Invalid
16	10	0	1900	Invalid
17	10	4	2021	invalid
18	10	4	2011	9/4/2011
19	20	6	1950	19/6/1950
20	50	6651	12	Invalid

Code Screenshots (have attached a file containing cpp code)

Q2)

[201801025, 201801052, 201801210, 201801153]

Given Constraints:

Item_id : 00000 to 99999

Quantity : 1 to 99

Cart Total <= \$999.99

Assumptions:

- Cart total can't be less than zero.

Final Constraints:

Item_id : [00000 , 99999]

Quantity : [1, 99]

Cart Total : [\$0, \$999.99]

Equivalence classes :

Item_id (ID)

1. $00000 \leq ID \leq 99999$
2. $ID < 00000$
3. $ID > 99999$

Quantity(Qty)

1. $1 \leq \text{Quantity} \leq 99$
2. $\text{Quantity} = 0$
3. $\text{Quantity} > 99$
4. $\text{Quantity} < 0$

Item Total (Item Total = Item Price * Quantity)

1. $\$0 \leq \text{I.T} \leq \$ 999.99$
2. $\text{I.T} < \$0$
3. $\text{I.T} > \$999.99$

Edge cases

- User modifies the quantity of some item from a valid number to 0.
Expected behavior: Delete item from shopping cart.
- The payment method is not a credit card.
Expected behavior: Invalid mode of payment.

Test cases having (boundary) below  are boundary value cases.

TEST CASES	INPUT	EXPECTED RESULT
Item_id < 00000	-10101	Invalid
Item_id = 00000(boundary)	00000	Valid
Item_id = 000001 (boundary)	000001	Valid
Item_id = 99998(boundary)	99998	Valid
Item_id = 99999(boundary)	99999	Valid
Item_id > 99999	254189	Invalid

I.T < \$0	- \$123.25	Invalid
I.T = \$1(boundary)	\$1	Valid
I.T = \$2(boundary)	\$2	Valid
I.T > \$999.99	\$1254	Invalid
I.T = \$999.99 (boundary)	\$999.99	Valid
I.T = \$998.99(boundary)	\$998.99	Valid
Qty < 0	-4	Invalid
Quantity = 0 (boundary)	0	Discard
Quantity=1 (boundary)	1	Valid
1<= Quantity <= 99	70	Valid
Quantity = 99 (boundary)	99	Valid
